Fire Department • Fire and Environmental Protection Division • 1000 Villa Street • Mountain View, CA 94041-1295 650-903-6378 • FAX 650-903-6122

## Plan Check Requirements for: SPRAY FINISHING

(Update—12/03)

The Fire and Environmental Protection Division of the Mountain View Fire Department (650-903-6378) will review your submitted plans using this plan check guideline.

Where appropriate, enter below the <u>page number</u> of your submitted plans where the item asked for is described and <u>highlight the item in your plans</u>, Include brochures, manufacturer's cut sheets, and calculations with the plans when asked for.

If all the required information asked for is included in your plans or attachments, they can be reviewed and approved by the Fire and Environmental Protection Division as quickly as five working days.			
************************************	**********	**********	************
Facility Name:		Address:	
Architect Name:	Phone:	PC#:	Date:
		Annlies To:	

- 1. The application of flammable or combustible paints, varnishes, lacquers, stains or other flammable or combustible liquid applied as spray by compressed air, airless or hydraulic atomization, steam, electrostatic or other methods or means in continuous or intermittent processes;
- 2. Dip tank operations in which articles or materials are passed through contents of tanks, vats or containers of flammable or combustible liquids, including coating, finishing, treatment and similar processes; and
- 3. The application of combustible powders by powder spray guns, electrostatic powder spray guns, fluidized beds or electrostatic fluidized beds.
  - 1) Conspicuous signs with the following warning shall be posted in the vicinity of spraying areas, dipping operations and paints storage rooms:

## **NO WELDING**

The user of welding or cutting equipment in or near this area is dangerous because of fire and explosion hazards. Welding and cutting shall be done only under the supervision of the person in charge.

(CFC 4501.5). Indicate the sign and its location on the plans. Plan page number: \_\_\_\_\_.

2) Spray booths must be made of not less than 18 gage thickness steel (CFC 4502.2.1). Attach manufacturer's cut sheets of the spray booth to the plans. Plan page or cut sheet page number:
3) Aggregate area of spray booths in a building shall not exceed the lesser of 10% of any floor of the building or the basic area allowed for a Group H Division 2 occupancy (CFC 4502.2.2). Attach calculations to the plans showing this limit is not exceeded. Plan page number:
4) Spray booth area cannot exceed the lesser of the aggregate area (from item #3 above) or 1,500 square feet (CFC 4502.2.2). Attach calculations to the plans showing this limit is not exceeded. Plan page number:
5) Spray booth floors shall be of noncombustible and non-sparking materials (CFC 4502.2.4). <i>Indicate materials of construction on the plans.</i> Plan page or cut sheet number:
6) If spray booth has ceiling baffles, the baffles shall be of noncombustible material and shall not be installed in the exhaust duct (CFC 4502.2.5). <i>Indicate materials of construction and show location of baffles on the plans.</i> Plan or cut sheet page number:
7) If front opening exceeds 9 square feet and is not equipped with doors, a metal deflector or fire curtain at least 4.5 inches deep is required at the upper outer edge of the booth and extending down over the booth opening (CFC 4502.2.6). <i>Indicate which option will be used and show location of deflector/curtain on plans</i> . Plan or cut sheet page number:
8) Three (3) feet clearance is required around the spray booth CFC 4502.2.7,8). <i>Indicate the clearance distance on the plans</i> . Plan page number:
9) Fixed lighting shall be of heat-treated or hammered wire glass (CFC 4502.2.9). <i>Attach manufacturer's cut sheets of the lighting.</i> Plan or cut sheet page number:
10) Exit doors shall not be less than 2'6" x 6'8" (CFC 4502.2.10). <i>Indicate door dimensions on the plans.</i> Plan page number:
11) If the booth uses dry filters or filter rolls which advances when air velocity drops below 100 linear ft/min., spraying must stop when roll fails to advance (CFC 4502.3.2). Show the electrical schematics for the spraying and roll interlock. Plan page number:
12) When air velocity drops below 100 linear ft/min., a visible gage must indicate this situation and an audible alarm must sound (CFC 4502.3.2). Attach cut manufacturer's cut sheets for the gage and alarm. Plan or cut sheet page number:
13) No open flames or spark-producing devices are allowed within 20 feet of the booth unless separated by a partition (CFC 4502.4.1). List all spark-producing devices and indicate where they will be stored and their distances from the spray booth. Plan page number:
14) Space heaters, steam pipes or other hot surfaces shall not be located in the spraying area (CFC 4502.4.2). <i>If any of these devices will be used, list them and show where they will be stored.</i> Plan page number:
15) Electrical equipment in spraying areas located such that deposits of combustible residues could readily accumulate thereon shall be specifically approved for locations containing deposits of readily ignitable residue and explosive vapors. (CFC 4502.4.3.1). Attach manufacturer's cut sheets on all electrical equipment subject to combustible residues.

16) Electrical wiring and equipment <u>not</u> so spray booth shall be of an explosion-proof location (CFC 4502.4.3.2). <i>Indicate the ty</i>	of type approved for use in	a Class I, Division 1 hazardous
17) Electrical wiring, motors or other equibe approved for use in a Class I, Division partitions, guards or enclosures (CFC 45 protection on the plans. Plan page numb	2 hazardous location and 202.4.3.2). <i>Indicate the type</i>	protected from falling hot particles by
18) Metal parts of the spray booth, exhau 4502.4.4). Show the grounding rod and k		
19) Spraying equipment shall be interloc conducted unless the ventilation system i the spray and ventilation interlock on the	s working (CFC 4502.5.1)	. Show the electrical schematics for
20) Air velocity over the open face of the 4502.5.2). Attach manufacturer's cut she		
21) Each spray booth must have an inde 4502.5.3). Show the exhaust ducting on		
22) Electric motors driving exhaust fans (4502.5.4). Show location of all motors.		
23) Fan rotating elements shall be of nor materials of construction on plans. Plan		e materials (CFC 4502.5.4). Specify
24) Exhaust ducts shall be constructed of CFC 4502.5.5):	of steel having a thickness	in accordance with the following table
<u>Diameter of</u> 8 or Over	r 8 to 18 r 18 to 30 r 30	Minimum Sheet Thickness (inches) 0.021 (24 gage) 0.027 (22 gage) 0.033 (20 gage) 0.044 (18 gage) age number:
25) The point of discharge of exhaust du 30 feet from property line; 10 feet from openings into the 6 feet from exterior walls or re	cts shall be not less than e building; oofs; ls or openings into the building. e. (CFC 4502.5.5). charge to property lines, be	the following:  Ilding which are in the direction of the uilding openings, exterior walls and
26) Clearance between combustible confollowing table (CFC 4502.5.6.1):	struction and the exhaust	duct shall be in accordance with the
	Type of Combustib -protected 3 in. (28 gage) sheetmeta	le Construction I on 1/4in insulating millboard

	9	0.013 in. (28 gage) sheetmetal on 1/8in insulating millboard spaced out 1 inch on noncombustible spacers
	3	0.027 in. (22 gage) sheetmetal on 1-inch rockwool batts reinforced with wire mesh
	Indicate the clearance and ty	pe of construction on the plans. Plan page number:
0	27) Ventilation air intakes shall e the air intakes on the plans. Plan	extend within 6 inches of the floor (CFC 4502.5.7). <i>Indicate the location of</i> page number:
0	28) Ducting bends shall not be g bends in the plans. Plan page n	reater than 45 degrees (CFC 4502.5.8). Show all ducting and angles of umber:
		provided at intervals which allow thorough cleaning of the ducts. (CFC enings in the ducts. Plan page number:
	equal to or greater than the duct	equipped with tightfitting sliding or hinged doors constructed of metal thickness. Such doors shall also be provided with a substantial latch to 2 4502.5.9). <i>Indicate the location and thickness of the hinged doors.</i> Plar
		an approved fire-extinguishing system. The system shall be extended to and both sides of dry filters when such filters are used (CFC 4502.8.1). ystem:
		ktinguisher shall be located within 30 feet of the spray booth (CFC location of fire extinguishers on the plans. Plan page number:
		eleaning machines shall be listed and approved for this use (CFC urer's cut sheets on the guns and equipment, including appropriate
For Dr	ying Apparatus:	
		of the portable infrared type, it shall be listed and approved for use with . Attach manufacturer's cut sheets on the drying apparatus. Plan page
	<ul> <li>2) Purge spray vapors for 3) Shut down drying system</li> <li>4) Shut down drying system</li> <li>infrared heaters are used (C</li> </ul>	le drying operations are in progress; or 3 minutes minimum before drying can begin; stem if ventilation fails; stem if air temperature exceeds 160F when other than portable
		paratus is used, all electrical equipment located within 18" of floor level vision 2 wiring (CFC 4502.10.2.2.6). List all electrical equipment and e number:
	, .	·

	Show location of the drying/baking unit as well as electrical schematics for the required interlocks. Plan page number:
For Di	pping Operations:
	38) If conveyorized dipping system is used, an interlock is required such that failure of the ventilation system will stop the conveyor (CFC 4503.2). Show the electrical schematics for the ventilation and conveyor interlock. Plan page number:
	39) Dip tanks shall be made of noncombustible materials and supports made of heavy metal or reinforced concrete (CFC 4503.3.1) <i>Specify the materials of construction for the dip tank and drain board.</i> Plan page number:
	40) If a dip tank exceeds 150 gallon capacity or 10 square feet in liquid surface area, an overflow pipe is required located at least 6" below the tank top (CFC 4503.3.2). Show location of the pipe on the plans. Plan page number:
	41) If a dip tank exceeds 500 gallon capacity, the tank shall have an automatic and manual drain which can drain the tank contents in event of fire. Manual operation must be from a safe location. If the liquid cannot gravity flow, a pump is required (CFC 4503.3.3). Attach manufacturer's cut sheets for the automatic drain which explains how it will be activated in a fire. Show the location of the manual drain on the plans. Plan page number:
	42) If a dip tank uses a conveyor system, an interlock system must be provided which will stop the conveyor and open the bottom drain during a fire (CFC 4503.3.4). Show the electrical schematics for the interlock and drain on the plans. Plan page number:
	43) Open flames and spark-producing devices shall be at least twenty feet from vapor areas unless separated by a tight partition (CFC 4503.5.1). <i>Indicate on the plans any flame or spark-producing devices and their distances from the tank.</i> Plan page number:
	44) Electrical wiring and equipment in vapor areas shall be explosion-proof Class I, Division 1 (CFC 4503.5.3.1). <i>Indicate the type of wiring on the plans.</i> Plan page number:
	45) Electrical wiring and equipment outside of, but within 20 feet of, a vapor area and not separated by a vapor-tight partition shall be approved for Class I, Division 2 (CFC 4503.5.3.3). Describe any equipment within 20' of the dip tank vapor area and specify the type of wiring on the plans. Plan page number:
	46) Approved metal waste cans are required for waste and rags used in connection with the dipping operations (CFC 4503.6.2). Attach manufacturer's cut sheets for the waste cans.
	47) At least one 4A-40 B:C fire extinguisher shall be located within 30 feet of the dip tank (CFC 4503.7.1). Indicate the type and location of fire extinguishers on the plans. Plan page number:
	48) If dip tank exceeds 150 gallons capacity or 10 square foot liquid surface area, a fire extinguishing system or automatic-closing cover is required (CFC 4503.7.2). <i>Indicate which system will be used on the plans</i> . Plan page number:
	49) If the: 1) dip tank exceeds 10 gallon capacity; and 2) surface area exceeds 4 square feet; and 3) tank contents has flash point under 110F where the tank temperature may exceed this flash point, a fire extinguishing system or automatic-closing cover is required (CFC 4503.7.2). <i>Indicate which system will be used on the plans</i> . Plan page number:

	50) If automatic covers are used, they shall be provided with an interlock which closes them in the event of a fire (CFC 4503.8.2). Attach manufacturer's cut sheets on the heat sensor. Show the electrical schematics for the interlock. Plan page number:
	51) If automatic covers are used, they shall of substantial noncombustible construction or of tin-clad type with enclosing metal applied with locked joints (CFC 4508.3). <i>Call out the materials of construction for the cover.</i> Plan page number:
	52) Tanks shall be provided with a noncombustible hood and vent. Vent ducts shall be treated as flues and kept away from combustible roof materials (CFC 4503.9.3). Call out the location and materials of construction for the hood and vent. Plan page number:
	53) Tanks shall be equipped with high-temperature/low level shutoff controls. The high-temperature sensor shall sound an alarm when the temperature of the quenching medium reaches 50F below the flash point (CFC 4503.9.4). Attach manufacturer's cut sheets on the high-temperature/low level sensor. Indicate the location of the alarm on the plans. Plan page number:
	54) Hardening and tempering tanks over 500 gallon capacity or 25 sq. ft. surface area shall be equipped with either an automatic fire extinguishing system or automatic-closing tank cover (CFC 4503.9.5). Indicate whether any hardening or tempering tanks will be installed, and if so, whether a fire-extinguishing system or tank cover will be employed. Plan page number:
	55) If flow-coating operations are used, paint shall be applied by a direct low-pressure pump with an interlock which will shut down the pump in case of fire (CFC 4503.10.1). Attach manufacturer's cut sheets on the heat sensor. Show the electrical schematics for the interlock. Plan page number:
	56) All metallic equipment shall be grounded and bonded to prevent sparks from static electricity (CFC 4503.10.4). <i>Indicate the type of grounding and bonding on the plans.</i> Plan page number:
For Ele	ectrostatic Apparatus:
	57) Electrostatic apparatus shall be of approved types (CFC 4504.1.1). Attach manufacturer's cut sheets on the electrostatic apparatus. Plan page or cut sheet number:
	58) A suitable sign stating that a distance of at least twice the sparking distance between the painted object and the electrode shall be conspicuously posted (CFC 4504.2.1). Show the sign location on the plans. Plan page number:
	<ul> <li>59) An interlock system which will automatically disconnect the power supply to the high-voltage transformer and signal the operator is required when: <ul> <li>1) The ventilation equipment fails or is stopped;</li> <li>2) The conveyor carrying parts past the high-voltage grid is stopped;</li> <li>3) A ground on the high-voltage grid occurs; and</li> <li>4) Twice the sparking distance clearance is compromised. (CFC 4504.2.2).</li> </ul> </li> <li>Show the electrical schematics for the interlock and the ventilation system, conveyor, and grid. Plan page number:</li> </ul>
	60) Railings, fencing, or guards shall be placed around the equipment to isolate it from personnel. They shall be adequately grounded and bonded and located at least 5 feet from the equipment (CFC 4504.3.1). Show the guard placement around the equipment and the bonding on the plans. Plan page number:
	61) Areas used for electrostatic spray finishing shall be equipped with a 4A-40B:C fire extinguisher (CFC 4504.6). <i>Indicate the type and location of the fire extinguisher on the plans.</i> Plan page number:

## For Powder Coating Processes:

	62) Powder coating shall be conducted in completely enclosed rooms constructed of noncombustible materials, enclosed powder coating facilities, or adequately ventilated spray booths (CFC 4505.2). <i>Indicate the type of room to be used.</i> Plan page number:
	63) Exhaust ventilation must be provided to maintain the atmosphere below the lower explosive limit (CFC 4505.4). Attach manufacturer's cut sheets on the exhaust ventilation system. Plan page number:
	64) Transformers, power packs, control apparatus and other electrical portions of equipment shall be located outside of the powder coating area (CFC 4505.8.8). Show the location of this equipment on the plans. Plan page number:
	65) Electrically conductive objects shall be adequately grounded. The powder-coating equipment shall carry a prominent, permanently installed warning regarding the necessity for grounding these objects (CFC 4505.8.3). Show location of grounding and bonding apparatus. Indicate the location of the warning sign. Plan page number:
	66) Electrical equipment shall be interlocked with the ventilation system so that equipment cannot be operated unless the ventilation fans are in operation (CFC 4505.8.4). Show the electrical schematics of the interlock on the plans. Plan page number:
0	67) Powder coating areas shall be protected by an approved automatic fire-extinguishing system (CFC 4505.9.1). Show the fire-extinguishing system on the plans. Plan page number:
	68) Upon detection of a fire by a flame detection device, an interlock system shall:  1) Shut down power to conveyors, ventilation, and transfer and powder collection equip.;  2) Close dampers in ductwork;  3) Activate an alarm throughout the powder coating room or booth (CFC 4505.9.2)).  Attach manufacturer's cut sheets on the flame detection device. Plan or cut sheet page number:  Show the electrical schematics for the interlock and conveyors, ventilation, transfer and powder collection system, dampers, and alarm. Plan page number:
For Or	ganic Peroxide and Dual-Component Coatings:
	69) Spray guns and associated equipment shall be specifically manufactured for such use (CFC 4506.1.2). Attach manufacturer's cut sheets on the spray guns and associated equipment. Plan page o cut sheet number:
•	70) Only nonsparking tools shall be used in areas where organic peroxides are stored, mixed or applied (CFC 4506.6). <i>Specify the types of tools in the plans.</i> Plan page number:
	71) Personnel working with organic peroxides and dual-component coatings shall be specifically trained to work with these materials (CFC 4506.7). List the personnel and their specific training courses in the plans. Plan page number:
